

## **Express Pharma article 2013: Testing strategies for generic inhaled products**

This introductory article, authored by Mark Copley, Sales Director, Copley Scientific, was written specifically for the Indian inhaled product market. It examines the tests routinely applied to orally inhaled products (OIPs), focusing on generic manufacture and the demonstration of bioequivalence.

The article provides an introduction to two of the central techniques used to characterise inhaled products: delivered dose uniformity testing and aerodynamic particle size measurement. The role of these tests in generic product development and testing is outlined, with emphasis on the way in which they support the demonstration of bioequivalence. New and complementary testing innovations that also assist with regulatory compliance are described.
